

**SECTION 1. Identification of the substance/mixture and of the company/enterprise****1.1. Product identifier**

Product name : PERACID Forte  
Product code: refer to sales department

**1.2. Relevant identified uses of the substance or mixture and uses advised against**

Aqueous solution of Oxidising agents and bleaches

Sectors of use:

Industrial Manufacturing[SU3], Manufacture of food products[SU4], Public domain (administration, education, entertainment, services, craftsmen)[SU22]

Product category:

Washing and Cleaning Products (including solvent based products)

Process categories:

Use in batch and other process (syn- thesis) where opportunity for exposure arises[PROC4], Industrial spraying[PROC7], Transfer of substance or mixture (charging and discharging) at nondedicated facilities[PROC8A], Transfer of substance or mixture (charging and discharging) at dedicated facilities[PROC8B], Non industrial spraying[PROC11], Treatment of articles by dipping and pouring [PROC13], Brushing / scrubbing after spray application (trigger) or brushing / scrubbing with tools [PROC10]

Not recommended uses

Do not use for purposes other than those listed

**1.3. Details of the supplier of the safety data sheet**

**SECTION 2. Hazards identification****2.1. Classification of the substance or mixture**

2.1.1 Classification according to Regulation (EC) No 1272/2008:

Pictograms:

GHS02, GHS05, GHS06, GHS07, GHS09

Hazard Class and Category Code(s):

Org. Perox. F, Met. Corr. 1, Acute Tox. 4, Acute Tox. 3, Skin Corr. 1A, Eye Dam. 1, STOT SE 3, Aquatic Acute 1, Aquatic Chronic 1

Hazard statement Code(s):

H242 - Heating may cause a fire.

H290 - May be corrosive to metals.

H302+H332 - Harmful if swallowed or if inhaled

H311 - Toxic in contact with skin.

H314 - Causes severe skin burns and eye damage.

H318 - Causes serious eye damage.

H335 - May cause respiratory irritation.

H400 - Very toxic to aquatic life.

H410 - Very toxic to aquatic life with long lasting effects.

The product is unstable and can catch fire in contact with heat sources

The product can be corrosive to metals

Toxic product: do not put in contact with skin.

Harmful product: do not ingest or inhale

Corrosive product: causes severe skin burns and eye damage.

If inhaled, the product causes irritations to the respiratory tract.

If brought into contact with eyes, the product causes serious damages to eyes, such as an opaque cornea or injury to iris.

The product is dangerous for the environment as it is very toxic to aquatic organisms

The product is dangerous to the environment as it is very toxic to aquatic life with long lasting effects

### 2.1.2 Additional information:

For full text of Hazard- and EU Hazard-statements: see SECTION 16.

### 2.2. Label elements

Labelling according to Regulation (EC) No 1272/2008:

Pictogram, Signal Word Code(s):  
GHS02, GHS05, GHS06, GHS09 - Danger

Hazard statement Code(s):  
H242 - Heating may cause a fire.  
H290 - May be corrosive to metals.  
H302+H332 - Harmful if swallowed or if inhaled  
H311 - Toxic in contact with skin.  
H314 - Causes severe skin burns and eye damage.  
H335 - May cause respiratory irritation.  
H410 - Very toxic to aquatic life with long lasting effects.

Supplemental Hazard statement Code(s):  
EUH071 - Corrosive to the respiratory tract.

#### Precautionary statements:

##### Prevention

P210 - Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.  
P280 - Wear protective gloves/clothing and eye/face protection.

##### Response

P301+P330+P331 - IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.  
P302+P352 - IF ON SKIN: Wash with plenty of water.  
P304+P340 - IF INHALED: Remove person to fresh air and keep comfortable for breathing.  
P305+P351+P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.  
P310 - Immediately call a POISON CENTER or a doctor.

##### Disposal

P501 - Dispose of contents/container to local/regional/national/international regulations

#### Contains:

acetic acid, hydrogen peroxide, peracetic acid

#### Contains (Reg.EC 648/2004):

> 30% oxygen-based bleaching agents, < 5% phosphonates

### 2.3. Other hazards

Based on the available data, no PBT or vPvB substances are present in accordance with Regulation (EC) 1907/2006, annex XIII

Based on available data, there are no substances that interfere with the endocrine system in accordance with Regulation (EU) 2017/2100 and Regulation (EU) 2018/605 in concentrations >0.1.

The use of this chemical agent implies the obligation of the "risk assessment" by the employer according to the provisions of Legislative Decree April 9, 2008 no. 81 and subsequent amendments. If the results of the risk assessment demonstrate that, in relation to the type, quantity, methods and frequency of exposure, there is only a low risk for the safety and irrelevant for the health of the workers and that the measures referred to in paragraph 1 of Legislative Decree April 9, 2008 no. 81 are sufficient to reduce the risk, the provisions of articles 225, 226, 229, 230 of the same

Legislative Decree do not apply  
Do not ingest. Keep out of reach of children.

**SECTION 3. Composition/information on ingredients**

**3.1 Substances**

Irrilevant

**3.2 Mixtures**

Substance	Concentration[ w/w]	Classification	Index	CAS	EINECS	REACH

## SECTION 4. First aid measures

### 4.1. Description of first aid measures

In case of skin contact: Remove contaminated clothing immediately.

CONSULT A DOCTOR IMMEDIATELY. Remove contaminated clothing immediately and dispose of it safely. In case of contact with skin, wash immediately with plenty of water and soap.

In case of eye contact: In case of contact with eyes, rinse with water for an adequate period of time, holding the eyelids open, then consult an ophthalmologist immediately. Protect the uninjured eye.

In case of ingestion: Do not give anything to eat or drink. In case of inhalation: If breathing is irregular or stopped, administer artificial respiration.

In case of inhalation, seek medical advice immediately and show the packaging or label.

### 4.2. Most important symptoms and effects, both acute and delayed

Harmful if swallowed, in contact with skin, or if inhaled. Causes severe skin burns and eye damage. May cause respiratory irritation.

### 4.3. Indication of any immediate medical attention and special treatment needed

In case of accident or discomfort, seek medical advice immediately (show instructions for use or safety data sheet if possible).

Treatment: "Indicate any immediate medical attention and special treatment needed. Treatment: Treat symptomatically and supportively." Notes to the physician: Take the victim to the hospital immediately. Immediate medical attention is required. Consult an ophthalmologist immediately in all cases. Burns must be treated by a physician. If swallowed: Avoid gastric lavage (risk of perforation). Maintain medical supervision for at least 48 hours. The physician will decide on further medical treatment after a thorough examination of the injured person. Symptomatic treatment

## SECTION 5. Firefighting measures

### 5.1. Extinguishing media

Suitable extinguishing media:

Water spray, foam, dry powder, or carbon dioxide.

Use extinguishing agent systems that are appropriate to local circumstances and the surrounding environment.

Unsuitable extinguishing media: Do not use a full water jet to prevent the spread or spread of the fire. Organic compounds. Extinguishing media that must not be used for safety reasons: Do not use a full water jet to prevent the spread or spread of the fire. Organic compounds; Halogens and full water jet; IT IS RECOMMENDED NOT TO USE A full water jet as an extinguishing agent.

### 5.2. Special hazards arising from the substance or mixture

Specific hazards during firefighting: Contact with incompatible materials or exposure to temperatures above the SADT may cause a self-accelerating decomposition reaction, releasing flammable vapours that may ignite. The product burns violently. Flashback possible even at a considerable distance. Vapours may form explosive mixtures with air. Cool closed containers exposed to fire with water spray. Special hazards arising from the substance or mixture. Specific fire hazards: WARNING: reignition may occur. Oxidising.

The use of water spray may be ineffective unless used by experienced firefighters. Do not allow extinguishing agents to enter drains or watercourses. Hazardous decomposition products in the event of fire. Hazardous combustion products: The flame produces smoke containing hazardous combustion products (see Section 10).

A fire often produces thick black smoke; exposure to decomposition products may be hazardous to health. Hazardous combustion products: Decomposition/combustion products may include the following materials: carbon oxides, nitrogen oxides (NO<sub>x</sub>), sulphur oxides, phosphorus oxides, carbon dioxide, carbon monoxide and water.

### 5.3. Advice for firefighters

Protective equipment for firefighters: full-body flame-retardant protective gear. Self-contained breathing apparatus. Use standard methods for extinguishing chemical fires. Evacuate staff. Extinguish small fires with dry powder or carbon dioxide, then use water to prevent reignition. Containers exposed to high temperatures should be cooled with water and, if possible, removed from the affected area. Water used to extinguish the fire must not enter drains or watercourses; "Advice for firefighters Special protective equipment for firefighters: In the event of a fire, wear a self-contained positive-pressure full-face respirator and protective suit. Further information: Use water spray to cool closed containers. Collect contaminated water used for firefighting separately. This must not be discharged into the drains. Fire residues and fire-contaminated extinguishing water must be disposed of in accordance with local regulations. In the event of a fire and/or explosion, do not breathe fumes. Use a self-contained breathing apparatus (SCBA) with a chemical protective suit.

## SECTION 6. Accidental release measures

### 6.1. Personal precautions, protective equipment and emergency procedures

#### 6.1.1 For non-emergency personnel:

For non-emergency responders: Remove all persons not involved in the emergency from the affected area. Alert rescuers or firefighters within the area. If immediate intervention is required, refer to the guidelines/instructions for emergency workers. Evacuate non-essential personnel and those not equipped with personal protective equipment. Prohibit all sources of sparks and ignition - No smoking. Avoid contact with skin and eyes and inhalation of vapours. Use personal protective equipment. In case of insufficient ventilation, wear suitable respiratory equipment.

#### 6.1.2 For emergency responders:

Personal precautions, protective equipment and emergency procedures For first-aiders: wear suitable personal protective equipment: self-contained breathing apparatus or a full-face gas mask with a filter. Wear suitable protective clothing (acid-resistant). Keep the product and empty containers away from sources of heat and ignition. Ensure adequate ventilation. Avoid contact with the substance or handling containers without adequate protection. Use water spray to reduce vapours or to redirect the movement of the cloud. Cordon off the area until the substance has completely dispersed. Avoid contact with sources of ignition. Avoid direct contact with the product and do not breathe in fumes or vapours. Use the personal protective equipment described in section 8. Prohibit all sources of sparks and ignition – No smoking. Avoid contact with skin and eyes and inhalation of vapours. Use personal protective equipment. In the event of inadequate ventilation, use a suitable respirator; refer to the safety measures listed in sections 7 and 8

### 6.2. Environmental precautions

Environmental precautions: Do not allow contact with soil, surface water or groundwater. DO NOT seal defective containers, including drums (risk of explosion due to product decomposition); Environmental precautions: Do not discharge the product into drains. Discharge into the environment must be avoided. Environmental precautions: Do not discharge the product into drains. Prevent further spillage or leakage, if this can be done safely.

In the event of contamination of rivers, lakes or sewers, inform the relevant authorities in accordance with local laws; DO NOT

hermetically seal any defective containers, including drums (risk of bursting due to the decomposition of the product)

### 6.3. Methods and material for containment and cleaning up

For containment: Absorb any spilled product using non-combustible absorbent materials and sweep up or remove with a shovel. "Methods and materials for containment and clean-up: Dike off the spill to prevent runoff from entering drains, sewers, watercourses, etc. Wet the spilled material with water and absorb with an inert absorbent material such as perlite, vermiculite or sand. Sweep up using non-sparking tools and place in a clean polyethylene drum or polyethylene bucket. DO NOT place in a steel container, lined or unlined, as decomposition may occur. Treat any contaminated cardboard packaging as hazardous waste. Wet the container with additional water before sealing it. Use absorbent material to solidify liquids. Clean up promptly by sweeping or vacuuming. Wear protective equipment, including eye protection, to avoid exposure (see Section 8 for specific handling precautions)"; "Large spill: stop the leak if there is no risk. Move containers away from the spill area. Use non-sparking tools and explosion-proof equipment. Approach the spill from upwind. Prevent entry into drains, watercourses, basements or confined spaces. Do not absorb with sawdust or other combustible material. It may pose a fire hazard when it dries. Wash spills into a wastewater treatment plant or proceed as follows. Contain and collect spills with non-combustible absorbent material, e.g. sand, earth, vermiculite or diatomaceous earth, and place in a container for disposal in accordance with local regulations (see Section 13). Spilled material may be neutralised with sodium carbonate, sodium bicarbonate or sodium hydroxide. Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may present the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal."; "Small spill: Pump into a recovery

tank. Large spill: Contain, absorb with an inert absorbent and pump into an emergency tank. Do not use: cloth, sawdust, flammable materials. Never return spills to the original containers for reuse. Store in suitable, correctly labelled and sealed containers for disposal." ; Do not return recovered product to the original containers for possible reuse. Collect in suitable containers for disposal. Small quantities: Wipe up with inert absorbent material (clean sand). Do not contain. Use non-sparking tools. For clean-up: Methods and materials for containment and clean-up. Clean-up methods: Stop the leak if there is no danger. Isolate the waste material and prevent it from coming into contact with incompatible materials. For small spills, contain with sand or vermiculite and dilute the product at least 10 times with water. Transfer to a sealable container and take to a safe place for neutralisation\* / disposal. For large spills, contain the leak and evacuate the area; wait until the reaction has ceased, then collect for disposal. Contact the local water management company / authorities if disposal via the sewer system is being considered. \*NEUTRALISATION: once diluted, neutralise with a suitable alkaline substance such as sodium bicarbonate. Combustible materials exposed to this product must be immediately rinsed with large quantities of water to ensure that all the product is removed. Residual product left to dry on organic materials such as rags, clothing, paper, textiles, cotton, leather, wood or other combustibles may spontaneously ignite and cause a fire. Methods and materials for containment and clean-up Clean-up methods: Contact with incompatible substances may cause decomposition at or below the auto-accelerated decomposition temperature. Clean up spills immediately. Disperse gases/vapours/mists with water sprays. To clean the floor and all objects contaminated by this material, use plenty of water. Dry with inert absorbent material. Isolate waste and do not reuse it. Non-sparking tools should be used. The handling and disposal of this material, as well as the materials and items used in cleaning up spills, may be subject to local or national regulations. The user is responsible for identifying the relevant regulations. Further information: Reference to other sections. For disposal considerations, see Section 13. For personal protection, see Section 8.

#### **6.4. Reference to other sections**

Refer to paragraphs 8 and 13 for more information

## **SECTION 7. Handling and storage**

### **7.1. Precautions for safe handling**

Risk of overpressure and explosion in the event of decomposition in closed containers and pipes. Handle in accordance with good industrial hygiene and safety practices. Wear personal protective equipment. Check that personal protective equipment is in good condition before use. Take ergonomic requirements into account when selecting personal protective equipment. Avoid contact with eyes, skin and clothing. Concentrations in the workplace must be kept below the specified limit values. If workplace limit values are exceeded and/or if large quantities are released (leaks, spills, dust), the specified respirator must be used. Do not inhale vapours, aerosols or atomised substances. Ensure good ventilation of the area. Change contaminated work clothing immediately. Wash contaminated clothing immediately with water. Avoid contamination and exposure to heat. Spilled product must never be returned to the original container for reuse. (Risk of decomposition.) Provide for the installation of an emergency shower and an eye wash station. Preparation of safety and usage instructions. Personal protective equipment used must comply with the requirements of Regulation (EU) 2016/425 and its amendments (CE marking). To be determined with reference to the workplace as part of a risk assessment in accordance with Regulation (EU) 2016/425 and its amendments

### **7.2. Conditions for safe storage, including any incompatibilities**

Conditions for safe storage, including any incompatibilities Commercial product Storage and container requirements: Keep away from reducing agents. Keep away from strong bases. Keep away from combustible substances. Absorb spills to prevent damage to property. Keep out of the reach of children. Keep the container tightly closed. Store in appropriately labelled containers. If the container is not adequately ventilated, an explosion may occur due to overpressure caused by gas production. Store only in the original container, in a cool, well-ventilated place, protected from light and away from combustible materials and reducing agents (amines), acids, bases, heavy metal compounds (accelerators, drying agents, metal salts). Store on an acid-resistant floor. Do not seal the container airtight. Always transport and store containers in an upright position. Risk of overpressure and bursting in the event of decomposition in closed containers and pipes. Storage temperature: 0 °C to 30 °C; Always transport and store containers in an upright position. Incompatible materials: Store away from incompatible materials (see Section 10 of the SDS). Incompatible products:

Strong oxidising agents; Strong reducing agents; Acids; Bases; Amines; Heavy metal compounds; Heavy metals; Sulphur compounds; Rust, ash, dust (risk of self-accelerating exothermic decomposition); transition metal salts; Store only in the original container, in a cool, well-ventilated place, protected from light and away from combustible materials and reducing agents (amines), acids, bases, heavy metal compounds (accelerators, drying agents, metal salts)

Premises requirements: PAA: Store in a cool, well-ventilated, clean, lockable place. Recommendation: Acid-resistant flooring. Use suitable venting devices on all packages, containers and tanks and check their correct functioning periodically. Do not confine the product in unventilated containers or behind closed valves. Risk of overpressure and explosion due to decomposition in confined spaces and pipes. Check containers and tanks at regular intervals for any unusual changes such as pressure build-up (bulging), damage or leaks. Transport and store the container only in an upright position. Do not empty the container under pressure. Always seal the container tightly after removing the product. Do not keep the container sealed. Always ensure the seal is intact. Avoid leaks. Open containers must be carefully resealed and kept in an upright position to prevent leakage. Use only containers specifically authorised for: Peracetic acid. and/or Use only suitable materials for the transport, storage and installation of tanks. Storage requirements for areas and containers: Store only in the original container. Suitable container and packaging materials for safe storage: HDPE plastic container, polyethylene, glass. Unsuitable container materials: Metals. Store in a vented container. Keep in a designated area. Further information on storage conditions: Keep away from heat. Keep away from direct sunlight. Store in a cool place. Do not keep the container sealed. Recommended storage temperature: 0° - 30°C General storage advice: Do not store together with explosives, gases, oxidising solids, products that form flammable gases on contact with water, infectious products and radioactive products

Packaging materials:

Suitable materials: stainless steel (1.4571), polyethylene, polypropylene, polyvinyl chloride (PVC), polytetrafluoroethylene, glass, ceramics. Unsuitable materials: mild steel, iron, copper, brass, bronze, aluminium, zinc. Further information: Avoid direct sunlight, heat and thermal effects. Avoid contamination. See also Section 15. Periodically check the availability of water for emergency purposes (cooling, tank flooding, firefighting) and periodically verify that it is functioning correctly. For detailed information on design specifications for the construction of tanks and dosing systems, consult the manufacturer for advice. General storage advice Do not store together with: alkalis, reducing agents, metal salts (risk of decomposition). Do not store together with: flammable substances (fire risk)

### 7.3. Specific end use(s)

Industrial Manufacturing:

Handle with extreme caution. Store in a well-ventilated area away from heat sources. Storage temperature: 0°C to 30°C;

Manufacture of food products:

Handle with care. Store in a clean, dry, ventilated area, away from heat and direct sunlight. Keep container tightly closed. Storage temperature: 0°C to 30°C;

Public domain (administration, education, entertainment, services, craftsmen):

Handle with caution. Store in a well-ventilated area away from heat sources. Keep container tightly closed. Storage temperature: 0°C to 30°C;

See the annex exposure scenario.

## 8.2. Exposure controls

Appropriate engineering controls:

Industrial Manufacturing:

No specific monitoring foreseen (act according to good practice and specific rules for the type of risk associated)

Manufacture of food products:

No specific monitoring foreseen (act according to good practice and specific rules for the type of risk associated)

Public domain (administration, education, entertainment, services, craftsmen):

No specific monitoring foreseen (act according to good practice and specific rules for the type of risk associated)

8.2.2 Individual protection measures:

(a) Eye / face protection

---

Close-fitting safety goggles. Wear a face shield and protective clothing in the event of abnormal processing issues. Eye/face protection (EN 166): Goggles with side shields. Protective visor

(b) Skin protection

(i) Hand protection

Hand protection Material: Nitrile rubber Permeation time: 30 min Glove thickness: 0.40 mm Directive: The equipment must comply with EN 374 Material: butyl rubber Permeation time: 120 min Glove thickness: 0.70 mm Directive: The equipment must comply with EN 374 Remarks: The data regarding permeation time/material resistance are standard values! The exact permeation times/material resistance must be obtained from the protective glove manufacturer. The finish of protective gloves for use with chemicals must be selected based on the concentration and quantity of hazardous substances anticipated for individual tasks. For specific applications, it is recommended to define the specific chemical resistance with the work glove manufacturer. Wash hands before breaks and at the end of the working day.

(ii) Other

When handling the undiluted product, wear clothing that fully covers the skin (general-purpose or acid-resistant workwear, S3 safety footwear in accordance with EN ISO 20345) or other protective equipment, as instructed by your employer

(c) Respiratory protection

Control measures Appropriate engineering controls - Ensure adequate ventilation. - Implement the necessary technical measures to ensure that occupational exposure limit values are not exceeded. Respiratory protection: In the event of dust or aerosol formation, use a respirator with an approved filter. Respiratory protection with integrated dust/particle filter (EN 141) Filter type: Filter - ABEK

(d) Thermal hazards

No hazard to report

Environmental exposure controls:

Use according to good working practices and avoid to disperse the product into the environment.

## SECTION 9. Physical and chemical properties

### 9.1. Information on basic physical and chemical properties

Physical and chemical properties	Value	Determination method
Physical state	Clear Liquid	
Colour	colorless	
Odour	Pungent	
Odour threshold	not determined as considered not relevant for the characterization of the product	
Melting point/freezing point	- 30/- 50°C (Peracetic Sol. 15%)	
Boiling point or initial boiling point and boiling range	> 100 ° C (Peracetic Sol. 15%)	
Flammability	not determined as considered not relevant for the characterization of the product	
Lower and upper explosion limit	non-explosive	
Flash point	>96°C ASTMD3278 Setaflash	>96°C ASTMD3278 Setaflash
Auto-ignition temperature	> 280°C (Peracetic Sol. 15%)	
Decomposition temperature	75°C SADT (Peracetic Sol. 15%)	
pH	<= 2.0 (20°C); 4.8 ± 0.5 (20°, 0.3%)	

Physical and chemical properties	Value	Determination method
Kinematic viscosity	<= 14 mm <sup>2</sup> /s (40 °C)	
Solubility	In the water	
Water solubility	water solubility: 1,000 g/l ( 20 °C) completely miscible solubility in other polar and non-polar sol	
Partition coefficient n-octanol/water (log value)	log Kow: = -0.52 measured as peracetic acid	
Vapour pressure	> 14 hPa (20°C)	
Density and/or relative density	1.1 - 1.15 (g/ml)	
Relative vapour density	not determined as considered not relevant for the characterization of the product	
Particle characteristics	not determined as it is considered irrelevant for the characterization of the product	

## 9.2. Other information

Volatile Organic Compounds (VOCs) = 32.00%

### 9.2.1 Information with regard to physical hazard classes

Explosive properties: Has no explosive properties - EEC Guideline 92/69

Method: Has no explosive properties - EEC Guideline 92/69

Oxidising properties: Not classified as an oxidiser. UN Test O.2

Method: Not classified as an oxidiser. UN Test O.2.

### 9.2.2 Other safety characteristics

Irrilevant

## SECTION 10. Stability and reactivity

### 10.1. Reactivity

Exothermic reaction with bases. Reactivity: Stable under normal conditions of use. Decomposes upon heating. Potential exothermic hazard.

### 10.2. Chemical stability

This mixture is stable under the handling and storage conditions recommended in section 7.

### 10.3. Possibility of hazardous reactions

Risk of overpressure and bursting if decomposed in closed containers and pipes. Risk of decomposition if incompatible substances, contaminants, metals, alkalis, reducing agents come into contact. Release of oxygen may promote fires. Decomposes if exposed to light. Do not mix with bleach or other chlorinated products – may release chlorine gas. Avoid amines. Possibility of hazardous reactions. Contact with the product, impurities, decomposition catalysts, metal salts, alkalis, reducing agents can lead to self-accelerating exothermic decomposition and the formation of oxygen. Risk of overpressure and bursting if decomposed in confined spaces and pipes. Release of oxygen may promote combustion.

**10.4. Conditions to avoid**

Conditions to avoid: Heat. Direct heat sources. Exposure to sunlight. Exposure to light. Freezing temperatures. Do not mix with chlorinated products. Avoid exposure to light and sunlight.

**10.5. Incompatible materials**

Bases Metals  
Organic materials  
Mild steel  
Aluminum  
Acids  
Bases  
Granulated metal salts  
Metals Reducing agents  
Flammable materials  
Organic materials  
Heavy metal salts  
Chlorinated products  
Decomposition catalysts, alkalis, reducing agents, iron, galvanized steels Brass, copper, aluminum, iron, zinc

**10.6. Hazardous decomposition products**

Steam, Oxygen, Acetic acid; At elevated temperatures, hazardous decomposition products may be produced, such as fumes, carbon dioxide and carbon monoxide, nitrogen oxides

**SECTION 11. Toxicological information****11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008**

- a) Acute toxicity The product is classified as: Acute Tox. 3(H311), Acute Tox. 4(H302), Acute Tox. 4(H332)
  - b) Skin corrosion/irritation The product is classified as: Skin Corr. 1A(H314)
  - c) Serious eye damage/serious eye irritation  
The product is classified as: Eye Dam. 1(H318)
  - d) respiratory or skin sensitisation  
Not classified  
Based on available data, the classification criteria are not met.
  - e) germ cell mutagenicity  
Not classified  
Based on available data, the classification criteria are not met.
  - f) carcinogenicity Not classified  
Based on available data, the classification criteria are not met.
  - g) reproductive toxicity Not classified
-

Based on available data, the classification criteria are not met.

h) Specific target organ toxicity (STOT) — single exposure

The product is classified: STOT SE 3(H335)

i) Specific target organ toxicity (STOT) — repeated exposure

Not classified

Based on available data, the classification criteria are not met.

j) Aspiration hazard Not classified

Based on available data, the classification criteria are not met.

Adverse health effects

Protective measures: The type of protective equipment must be selected based on the concentration and quantity of the hazardous substance at the workplace

-----  
Toxicological information regarding the main substances present in the product:

(a) acute toxicity: Toxic product: do not put in contact with skin. - Harmful product: do not ingest or inhale  
Hydrogen peroxide: Ingestion - LD50 rat (mg/kg/24h bw): 693 - 1.026 mg/kg (H2O2 70%) - risk of mouth, esophagus and stomach burns. For rapid oxygen release: Risk of stomach distension and haemorrhage with the possibility of serious injury, In animals: (as aqueous solution). LD50/Rat: 1,200 mg/kg (35%) - ATE value of 431 mg/kg.

Skin contact - Rabbit LC50 (mg/kg/24h bw): Irritating to skin. On the animal: aqueous solution. Irritating to skin.  
Superficial necrosis (After semi-occlusive contact, Rabbit, Exposure time: 4 h 35%) Corrosive to the skin. On humans:  
Effects of skin contact may include: discoloration, erythema, oedema. ATE value of 6500 mg/kg

Inhalation - LC50, 4 h, rat , > 0.17 mg/l, vapor (H2O2 50%) at high vapor concentrations/mists (technically maximum possible concentration 50%) At high vapor concentrations / mists: Risk of pulmonary edema, Delayed effects are possible. St

Acetic acid: LLD50 Oral Rat 3310 mg/kg bw

LC50 Inhalation of vapours Rat 40 mg/l 4h

Peracetic acid: LD50 Oral 80 mg/kg bw

LC50 dust/mist 0.2 mg/m<sup>3</sup>

LD50 Skin > 60 mg/kg bw

Sulphuric acid: Ingestion - LD50 rat (mg/kg/24h bw): 2140 Skin contact - LC50 rat/rabbit (mg/kg/24h bw): nd Inhalation

- LD50 rat (mg/m<sup>3</sup>/8h): nd

(b) skincorrosion/irritation: Corrosive product: causes severe skin burns and eye damage.

Hydrogen peroxide: Corrosive to the skin (after semi-occlusive contact, on rabbit, exposure time: 1 - 4 h) (50%)

Corrosive to the skin (after semi-occlusive contact, on rabbit, exposure time: 3 min) (50 - 70%).

Acetic acid: Corrosive

Peracetic acid: Corrosive

Sulphuric acid: Corrosive

Hydrogen peroxide: Corrosive to the skin (after semi-occlusive contact, on rabbit, exposure time: 1 - 4 h) (50%)

Corrosive to the skin (after semi-occlusive contact, on rabbit, exposure time: 3 min) (50 - 70%).

Acetic acid: Irritating

Peracetic acid: Irritating

Sulphuric acid: Irritating

(c) serious eye damage/irritation: Corrosive product: causes severe skin burns and eye damage. - If brought into contact with eyes, the product causes serious damages to eyes, such as an opaque cornea or injury to iris.

Hydrogen peroxide: Corrosive to the eyes (H2O2> 35%)

Acetic acid: Corrosive

Peracetic acid: Corrosive

Sulphuric acid: Corrosive

Hydrogen peroxide: Corrosive to the eyes (H2O2> 35%)

Acetic acid: Irritating

Peracetic acid: Irritating

Sulphuric acid: Irritating

(d) respiratoryorskinsensitisation: Hydrogen peroxide: Does not cause sensitization on laboratory animals (guinea pig)

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: It does not cause sensitization.

Sulphuric acid: Based on available data, the classification criteria are not met.

(e) germ cell mutagenicity: Hydrogen peroxide: Mutagenicity: According to available experimental data : Non-genotoxic In vitro Active In vivo In vivo mouse micronucleus test: Inactive (Method: OECD Test Guideline 474) DNA repair test on rat hepatocytes: Inactive (Method : OECD Test Guideline 486)

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: Based on available data, the classification criteria are not met.

Sulphuric acid: Based on available data, the classification criteria are not met.

(f) carcinogenicity: Hydrogen peroxide: Experimentation on animals has not shown clear evidence of carcinogenic effect. Target Organs: duodenum, carcinogenic effect. Dermal, Prolonged exposure, mouse, Animal testing did not show any carcinogenic effects. Did not show carcinogenic effects in animal experiments. Topical applications do not produce skin tumors. Not recognized as carcinogenic by Research Agencies (IARC, NTP, OSHA, ACGIH).

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: Based on available data, the classification criteria are not met.

Sulphuric acid: Based on available data, the classification criteria are not met.

(g) eproductivetoxicity: Hydrogen peroxide: Based on the available data, it cannot be assumed that the substance has a reprotoxic potential

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: Based on available data, the classification criteria are not met.

Sulphuric acid: Based on available data, the classification criteria are not met.

(h) specific target organ toxicity (STOT) single exposure: If inhaled, the product causes irritations to the respiratory tract.

Hydrogen peroxide: At high vapour/fog concentrations: Irritating to respiratory system. (> 200 ppm). Inhalation, mice, 665 mg/m<sup>3</sup> Remarks: RD 50, Irritating to respiratory system, H<sub>2</sub>O<sub>2</sub> 50%.

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: STOT SE 3, H335. C = 1% Respiratory Tract.

Sulphuric acid: Based on available data, the classification criteria are not met.

(i) specific target organ toxicity (STOT) repeated exposureHydrogen peroxide: Repeated Exposure: Studies of prolonged exposure in animals have not shown any toxic effects. • In animals : Oral: Irritation of gastric mucosa, NOAEL= 26mg/kg/d (Rat, 3 months) (drinking water) inhalation: Irritation of upper respiratory tract, Irritating to nose, Local effects related to an irritant effect, LOAEL = 0.0029 mg/l (Method: OECD Test Guideline 407, Rat, Repeated)

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: Based on available data, the classification criteria are not met.

Sulphuric acid: Based on available data, the classification criteria are not met.

(j) aspiration hazard: Hydrogen peroxide: Not available

Acetic acid: Based on available data, the classification criteria are not met.

Peracetic acid: Based on available data, the classification criteria are not met.

Sulphuric acid: Based on available data, the classification criteria are not met.

=====

Related to contained substances:

Hydrogen peroxide:

LD50 (rat) Oral (mg/kg body weight) = 693,7

CL50 Inhalation (rat) vapour/dust/mist/fume (mg/l/4h) or gas (ppmV/4h) = 11

Peracetic acid:

LD50 (rat) Oral (mg/kg body weight) = 80

LD50 Dermal (rat or rabbit) (mg/kg body weight) = 60

CL50 Inhalation (rat) vapour/dust/mist/fume (mg/l/4h) or gas (ppmV/4h) = 0,2

## 11.2. Information on other hazards

No data available.

### 11.2.1. Endocrine disrupting properties

Based on available data, there are no substances that interfere with the endocrine system in accordance with Regulation (EU) 2017/2100 and Regulation (EU) 2018/605 in concentrations >0.1.

## SECTION 12. Ecological information

### 12.1. Toxicity

Invertebrate Tanytarsus dissimilis 0.15 mg/L - 35d

oxicity to plants: EC50 Algae Desmodesmus subspicatus > 100 mg/L 72h - OECD 201

Acute toxicity M-factor = 1

Chronic toxicity M-factor = 1

The product is dangerous for the environment as it is very toxic to aquatic organisms following acute exposure.

Use according to good working practices and avoid to disperse the product into the environment.

### 12.2. Persistence and degradability

=====

Related to contained substances:

Hydrogen peroxide:

Abiotic degradation: air, indirect photooxidation, t 1/2 24 h Conditions: sensitizing agent: OH radical. Water, redox, t 1/2 120 h Conditions: mineral and enzymatic catalysis, fresh water, brackish water. Soil, redox, t 1/2 12 h Conditions: mineral and enzymatic catalysis. Biodegradation: aerobic, t 1/2, < 2 min Conditions: biological sewage sludge Readily biodegradable. Aerobic, t 1/2, 0.3 - 5 d Conditions: fresh water Readily biodegradable. Anaerobic Conditions: Soil/sediment not applicable. Aerobic, t 1/2, 12 h Conditions: Soil Readily biodegradable. Readily Biodegradable (28 Days – OECD TG 301 E)

Acetic acid:

Rapidly degradable Test: Oxygen consumption Notes: 96% / 20d

Peracetic acid:

Rapidly degradable Test: Dissolved organic carbon Notes: 98% / 28d, OECD 301E

Sulphuric acid:

Not available

### 12.3. Bioaccumulative potential

=====

Related to contained substances:

Hydrogen peroxide:

Not bioaccumulative. Rapid n-otanol/water degradation Log Kow: -1.57

Acetic acid:

Not bioaccumulative Test: BCF - Bioconcentration factor; Value: 3.16 Notes: QSAR Not bioaccumulative Test: Kow - Partition coefficient; Value: -0.17

Peracetic acid:

Not bioaccumulative Test: Kow - Partition coefficient; Value: -0.26 Notes: QSAR

Sulphuric acid:

Not available

### 12.4. Mobility in soil

=====

Related to contained substances:

Hydrogen peroxide:

Soil-Water: important solubility and mobility Soil/sediment, log KOC:0,2 evaporation and adsorption not significant. Air, Volatility, Henry's constant, = 0.75 kPa.m<sup>3</sup>/mol Conditions: 20 °C not significant. Surface tension: 75.7 mN/m % 20 °C /50 %.

Acetic acid:

---

Non-mobile Test: Log Koc; Value: 0.062 Notes: QSAR

Peracetic acid:

Not applicable due to the rapid degradation of peracetic acid in the environment

Sulphuric acid:

Not available

### 12.5. Results of PBT and vPvB assessment

Based on the available data, no PBT or vPvB substances are present in accordance with Regulation (EC) 1907/2006, annex XIII

### 12.6. Endocrine disrupting properties

Based on available data, there are no substances that interfere with the endocrine system in accordance with Regulation (EU) 2017/2100 and Regulation (EU) 2018/605 in concentrations >0.1.

### 12.7. Other adverse effects

No adverse effects

Regulation (EC) No 2006/907 - 2004/648

The (l) surfactant (s) content (s) in this preparation complies (comply) with (i) the biodegradability criteria as laid down in Regulation CE/648/2004 on detergents. All data are held at the disposal of the competent authorities of Member States and will be provided, at their direct request or at the request of a detergent manufacturer, to those authorities.

## SECTION 13. Disposal considerations

### 13.1. Waste treatment methods

Recover if possible. Send to authorized disposal facilities or for incineration under controlled conditions. Operate in accordance with current local and national regulations. Additional disposal information: Dispose of contents/container in a hazardous waste container. Due to the high risk, recovery is not recommended. Dispose of waste and packaging in accordance with the relevant waste management regulatory authorities and waste disposal regulations (likely combustion). Empty containers may contain product residues. Follow all warnings, even after emptying the container. Packaging must not be reused. Correct waste management of the mixture and/or its container must be determined in accordance with Directive 2008/98/EC.

## SECTION 14. Transport information

### 14.1. UN number or ID number

ADR/RID/IMDG/ICAO-IATA: 3109

If subject to the following characteristics is ADR exempt:

Combination packagings: per inner packaging 125 ml per package 30 kg

Inner packaging placed in skrink-wrapped or stretch-wrapped trays: per inner packaging 125 ml per package 20 kg

**14.2. UN proper shipping name**

ADR/RID/IMDG: PEROSSIDO ORGANICO DI TIPO F, LIQUIDO (ACIDO PEROSSIACETICO, TIPO F, STABILIZZATO)

ADR/RID/IMDG: ORGANIC PEROXIDE TYPE F, LIQUID (Peroxyacetic Acid, type F, stabilized)

ICAO-IATA: ORGANIC PEROXIDE TYPE F, LIQUID (Peroxyacetic Acid, type F, stabilized)

**14.3. Transport hazard class(es)**

ADR/RID/IMDG/ICAO-IATA: Class : 5.2

ADR/RID/IMDG/ICAO-IATA: Label : 5.2 + 8 + ENVIRONMENTALLY HAZARDOUS

ADR: Tunnel restriction code : D

ADR/RID/IMDG/ICAO-IATA: Limited quantities : 125 ml

IMDG - EmS : F-J, S-R

**14.4. Packing group**

ADR/RID/IMDG/ICAO-IATA: --

**14.5. Environmental hazards**

ADR/RID/ICAO-IATA: Product is environmentally hazardous

IMDG: Marine polluting agent : Yes

**14.6. Special precautions for user**

The transport must be carried out by authorized vehicles for the transport of dangerous goods in accordance with the requirements of the applicable Edition of the agreement A.D.R. and national provisions. The transport must be carried out in the original packaging and in packages that are made from materials resistant to content and not likely to generate with this dangerous reactions. The process of loading and unloading of dangerous goods have received adequate training on the risks presented by prepared and on possible procedures to be taken in the event of emergency situations

**14.7. Maritime transport in bulk according to IMO instruments**

Transport in bulk is not foreseen

**SECTION 15. Regulatory information****15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture**

Restrictions relating to the product or the substances contained (Annex XVII EC Reg. 1907/2006): not applicable  
Substances in Candidate list (art. 59 EC Reg. 1907/2006): the product does not contain SVHC in percentage = a 0.1 %.

Regulation (EC) 648/04: see point 2.2

Regulation (EU) 528/2012: see point 2.2

Seveso category:

P6b - SELF-REACTIVE SUBSTANCES AND MIXTURES and ORGANIC PEROXIDES  
E1 - ENVIRONMENTAL HAZARDS

REGULATION (EU) No 1357/2014 - waste:

HP6 - Acute Toxicity

HP8 - Corrosive

HP14 - Ecotoxic

## 15.2. Chemical safety assessment

A chemical safety assessment has been carried out for the following substances:

Hydrogen peroxide

Acetic acid

Peracetic acid

Sulphuric acid

## SECTION 16. Other information

### 16.1. Other information

Points modified compared to previous release: 2.1. Classification of the substance or mixture, 2.2. Label elements, 2.3. Other hazards, 3.2 Mixtures, 4.1. Description of first aid measures, 4.2. Most important symptoms and effects, both acute and delayed, 4.3. Indication of any immediate medical attention and special treatment needed, 5.1. Extinguishing media, 5.2. Special hazards arising from the substance or mixture, 5.3. Advice for firefighters, 6.1. Personal precautions, protective equipment and emergency procedures, 6.3. Methods and material for containment and cleaning up, 7.1. Precautions for safe handling, 7.2. Conditions for safe storage, including any incompatibilities, 7.3. Specific end use(s), 8.1. Control parameters, 8.2. Exposure controls, 9.2.1 Information with regard to physical hazard classes, 9.2.2 Other safety characteristics, 10.1. Reactivity, 10.2. Chemical stability, 10.3. Possibility of hazardous reactions, 10.4. Conditions to avoid, 10.5. Incompatible materials, 10.6. Hazardous decomposition products, 11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008, 11.2. Information on other hazards, 12.1. Toxicity, 12.2. Persistence and degradability, 12.3. Bioaccumulative potential, 12.4. Mobility in soil, 12.6. Endocrine disrupting properties, 13.1. Waste treatment methods, 15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture, 15.2. Chemical safety assessment

Description of hazard statements set out in paragraph 3

H271 = May cause fire or explosion; strong oxidiser.

H302 = Harmful if swallowed.

H314 = Causes severe skin burns and eye damage.

H318 = Causes serious eye damage.

H332 = Harmful if inhaled.

H335 = May cause respiratory irritation.

H400 = Very toxic to aquatic life.

H412 = Harmful to aquatic life with long lasting effects.

H226 = Flammable liquid and vapour.

H242 = Heating may cause a fire.

H301 = Toxic if swallowed.

H310 = Fatal in contact with skin.

H330 = Fatal if inhaled.

H410 = Very toxic to aquatic life with long lasting effects.

Classification and procedure used to derive the classification for mixtures according to Regulation (EC) 1272/2008 [CLP]:

## Classification according to Regulation (EC) Nr. 1272/2008

- H242 - Heating may cause a fire. Classification procedure: On basis of test data
- H290 - May be corrosive to metals. Classification procedure: On basis of test data
- H302 - Harmful if swallowed. Classification procedure: Calculation method
- H311 - Toxic in contact with skin. Classification procedure: Calculation method
- H314 - Causes severe skin burns and eye damage. Classification procedure: Calculation method
- H318 - Causes serious eye damage. Classification procedure: Calculation method
- H332 - Harmful if inhaled. Classification procedure: Calculation method
- H335 - May cause respiratory irritation. Classification procedure: Calculation method
- H400 - Very toxic to aquatic life. Classification procedure: Calculation method
- H410 - Very toxic to aquatic life with long lasting effects. Classification procedure: Calculation method

**SUMI****Safe Use of Mixtures Information****AISE\_SUMI\_IS\_4\_1***Version 1.1, August 2018****Industrial uses; Automated task; Semi-automated task; Dedicated equipment***

*This document is intended to communicate the conditions of safe use for the product and should always be read in combination with the product's Safety Data Sheet and labels.*

**General description of the process covered**

The SUMI applies to industrial uses where products are used in closed process where opportunity for exposure arises. This Safe Use Information is based on the **AISE\_SWED\_IS\_4\_1**.

**Operational Conditions**

<b>Maximum duration</b>	480 minutes per day.
<b>Range of application / Process conditions</b>	Indoor Use. Process carried out at room temperature. In case of dilution, tap water at a maximum temperature of 45°C is used.
<b>Air exchange rate</b>	Provide a basic standard of general ventilation (1 to 3 air changes per hour). No LEV required.

**Risk Management Measures**

<b>Measures related to personal protective equipment (PPE), hygiene and health evaluation</b>	See section 8 of the SDS of this product for specifications.
	Training of workers in relation to proper use and maintenance of PPEs must be ensured.
<b>Environmental measures</b>	Prevent that undiluted product reaches surface waters.
	<b>If appropriate AISE SPERC 8a.1.a.v2 may apply:</b> wide dispersive use resulting in release to municipal sewage treatment plant.

**Additional good practice advice**

<p><b>Don't eat or drink.</b>  <b>Don't smoke.</b>  <b>Don't use in proximity of open flame.</b></p>	
<p><b>Wash hands after use.</b>  <b>Avoid contact with damaged skin.</b>  <b>Do not mix with other products.</b></p>	
<p><b>Spillage instructions</b></p>	<p>Dilute with fresh water and mop up.</p>
<p><b>Hygiene practices</b></p>	<p>Follow the product instructions as specified on the label or in the product information sheet and use good occupational hygiene practices as specified in Section 7 of the product SDS.</p>

**Additional information depending on product composition**

The label and (when required) the Safety Data Sheet contain additional, product specific information crucial for working safely with mixtures. Please refer to the product label and SDS for information including, but not limited to: product hazard classification, potentially allergenic fragrances, notable ingredients and threshold limit values (when available).

**Disclaimer**

*This is a document for communicating generic conditions of safe use of a product. It is the responsibility of the formulator to link this SUMI to the SDS of a specific product that he is selling.*

*If a SUMI (or associated SWED) code is mentioned in the SDS of a product, the formulator of that product declares that all substances in the mixture are present in such concentration, that the use of the product within the conditions of the SUMI is safe. When available, this safe use is ensured by evaluating the results of the chemical safety assessments as performed by the raw material suppliers. When no chemical safety assessment has been carried out by the supplier for an ingredient that contributes to the classification of the mixture, the formulator has performed a safety assessment himself.*

*Following Occupational Health legislation, the employer of workers that use products that are assessed as safe following SUMI conditions remains responsible for communicating relevant use information to employees. When developing workplace instructions for employees, SUMI Sheets should always be considered in combination with the SDS and the label of the product.*

*This document is provided by A.I.S.E. for general information purposes only. The formulator uses the content of this document at its sole risk.*

*A.I.S.E. disclaims any liability to any person or entity for any loss, damage no matter of what kind (actual, consequential, punitive or otherwise), injury, claim, liability or other cause of any kind or character based upon or resulting from the use (even partly) of the content of this document.*

**SUMI****Safe Use of Mixtures Information****AISE\_SUMI\_IS\_7\_5***Version 1.1, August 2018****Industrial spraying; Automated task; Open system; Long term***

*This document is intended to communicate the conditions of safe use for the product and should always be read in combination with the product's Safety Data Sheet and labels.*

**General description of the process covered**

The SUMI applies to industrial spraying products. This Safe Use Information is based on the AISE\_SWED\_IS\_7\_5.

**Operational Conditions**

<b>Maximum duration</b>	480 minutes per day.
<b>Range of application / Process conditions</b>	Indoor Use. Process carried out at room temperature. In case of dilution, tap water at a maximum temperature of 45°C is used.
<b>Air exchange rate</b>	Provide a basic standard of general ventilation (1 to 3 air changes per hour). No LEV required.

**Risk Management Measures**

<b>Measures related to personal protective equipment (PPE), hygiene and health evaluation</b>	See section 8 of the SDS of this product for specifications. Training of workers in relation to proper use and maintenance of PPEs must be ensured.
<b>Environmental measures</b>	Prevent that undiluted product reaches surface waters. <b>If appropriate AISE SPERC 8a.1.a.v2 may apply:</b> wide dispersive use resulting in release to municipal sewage treatment plant.

**Additional good practice advice**

<p><b>Don't eat or drink.</b>  <b>Don't smoke.</b>  <b>Don't use in proximity of open flame.</b></p>	
<p><b>Wash hands after use.</b>  <b>Avoid contact with damaged skin.</b>  <b>Do not mix with other products.</b></p>	
<p><b>Spillage instructions</b></p>	<p>Dilute with fresh water and mop up.</p>
<p><b>Hygiene practices</b></p>	<p>Follow the product instructions as specified on the label or in the product information sheet and use good occupational hygiene practices as specified in Section 7 of the product SDS.</p>

**Additional information depending on product composition**

The label and (when required) the Safety Data Sheet contain additional, product specific information crucial for working safely with mixtures. Please refer to the product label and SDS for information including, but not limited to: product hazard classification, potentially allergenic fragrances, notable ingredients and threshold limit values (when available).

**SUMI****Safe Use of Mixtures Information****AISE\_SUMI\_IS\_8b\_1**

Version 1.1, August 2018

***Transfer and dilution of concentrated product by using dedicated dosing system***

*This document is intended to communicate the conditions of safe use for the product and should always be read in combination with the product's Safety Data Sheet and labels.*

**General description of the process covered**

This SUMI applies to industrial uses where products are transferred to or diluted in a dedicated dosing system. This Safe Use Information is based on the **AISE\_SWED\_IS\_8b\_1\_L** and **AISE\_SWED\_IS\_8b\_1\_S**

**Operational Conditions**

<b>Maximum duration</b>	60 minutes per day.
<b>Range of application / Process conditions</b>	Indoor Use.
	Process carried out at room temperature.
	In case of dilution, tap water at a maximum temperature of 45°C is used.
<b>Air exchange rate</b>	Provide a basic standard of general ventilation (1 to 3 air changes per hour). No LEV required.

**Risk Management Measures**

<b>Measures related to personal protective equipment (PPE), hygiene and health evaluation</b>	Wear suitable gloves. See section 8 of the SDS of this product for specifications.
	 Training of workers in relation to proper use and maintenance of PPEs must be ensured.
<b>Environmental measures</b>	Prevent that undiluted product reaches surface waters.
	<b>If appropriate AISE SPERC 8a.1.a.v2 may apply:</b> wide dispersive use resulting in release to municipal sewage treatment plant.

**Additional good practice advice**

<p><b>Don't eat or drink.</b></p> <p><b>Don't smoke.</b></p> <p><b>Don't use in proximity of open flame.</b></p>	
<p><b>Wash hands after use.</b></p> <p><b>Avoid contact with damaged skin.</b></p> <p><b>Do not mix with other products.</b></p>	
<b>Spillage instructions</b>	Dilute with fresh water and mop up.
<b>Hygiene practices</b>	Follow the product instructions as specified on the label or in the product information sheet and use good occupational hygiene practices as specified in Section 7 of the product SDS.

**Additional information depending on product composition**

The label and (when required) the Safety Data Sheet contain additional, product specific information crucial for working safely with mixtures. *This document is provided by A.I.S.E. for general information purposes only. The formulator uses the content of this document at its sole risk.*

*A.I.S.E. disclaims any liability to any person or entity for any loss, damage no matter of what kind (actual, consequential, punitive or otherwise), injury, claim, liability or other cause of any kind or character based upon or resulting from the use (even partly) of the content of this document.*

**SUMI****Safe Use of Mixtures Information****AISE\_SUMI\_PW\_4\_1***Version 1.1, August 2018****Professional uses; Semi-closed system***

*This document is intended to communicate the conditions of safe use for the product and should always be read in combination with the product's Safety Data Sheet and labels.*

**General description of the process covered**

The SUMI applies to professional uses where products are used in closed process where opportunity for exposure arises. This Safe Use Information is based on the **AISE\_SWED\_PW\_4\_1**.

**Operational Conditions**

<b>Maximum duration</b>	480 minutes per day.
<b>Range of application / Process conditions</b>	Indoor Use. Process carried out at room temperature. In case of dilution, tap water at a maximum temperature of 45°C is used.
<b>Air exchange rate</b>	Provide a basic standard of general ventilation (1 to 3 air changes per hour). No LEV required.

**Risk Management Measures**

<b>Measures related to personal protective equipment (PPE), hygiene and health evaluation</b>	See section 8 of the SDS of this product for specifications. Training of workers in relation to proper use and maintenance of PPEs must be ensured.
<b>Environmental measures</b>	Prevent that undiluted product reaches surface waters. <b>If appropriate AISE SPERC 8a.1.a.v2 may apply:</b> wide dispersive use resulting in release to municipal sewage treatment plant.

**Additional good practice advice**

<p><b>Don't eat or drink.</b>  <b>Don't smoke.</b>  <b>Don't use in proximity of open flame.</b></p>	
<p><b>Wash hands after use.</b>  <b>Avoid contact with damaged skin.</b>  <b>Do not mix with other products.</b></p>	
<p><b>Spillage instructions</b></p>	<p>Dilute with fresh water and mop up.</p>
<p><b>Hygiene practices</b></p>	<p>Follow the product instructions as specified on the label or in the product information sheet and use good occupational hygiene practices as specified in Section 7 of the product SDS.</p>

**Additional information depending on product composition**

The label and (when required) the Safety Data Sheet contain additional, product specific information crucial for working safely with mixtures. Please refer to the product label and SDS for information including, but not limited to: product hazard classification, potentially allergenic fragrances, notable ingredients and threshold limit values (when available).

**Disclaimer**

*This is a document for communicating generic conditions of safe use of a product. It is the responsibility of the formulator to link this SUMI to the SDS of a specific product that he is selling.*

*If a SUMI (or associated SWED) code is mentioned in the SDS of a product, the formulator of that product declares that all substances in the mixture are present in such concentration, that the use of the product within the conditions of the SUMI is safe. When available, this safe use is ensured by evaluating the results of the chemical safety assessments as performed by the raw material suppliers. When no chemical safety assessment has been carried out by the supplier for an ingredient that contributes to the classification of the mixture, the formulator has performed a safety assessment himself.*

*Following Occupational Health legislation, the employer of workers that use products that are assessed as safe following SUMI conditions remains responsible for communicating relevant use information to employees. When developing workplace instructions for employees, SUMI Sheets should always be considered in combination with the SDS and the label of the product.*

*This document is provided by A.I.S.E. for general information purposes only. The formulator uses the content of this document at its sole risk.*

*A.I.S.E. disclaims any liability to any person or entity for any loss, damage no matter of what kind (actual, consequential, punitive or otherwise), injury, claim, liability or other cause of any kind or character based upon or resulting from the use (even partly) of the content of this document.*

**SUMI****Safe Use of Mixtures Information****AISE\_SUMI\_PW\_8a\_1\_G***Version 1.1, August 2018****Transfer of product to a container (bottle/bucket/machine)***

*This document is intended to communicate the conditions of safe use for the product and should always be read in combination with the product's Safety Data Sheet and labels.*

**General description of the process covered**

This SUMI applies to professional uses where the product is transferred to or diluted in a container, such as a dispenser, bottle or bucket. Safe Use Information is based on the **AISE\_SWED\_PW\_8a\_1\_L** and **AISE\_SWED\_PW\_8a\_1\_S**.

**Operational Conditions**

<b>Maximum duration</b>	60 minutes per day.
<b>Range of application / Process conditions</b>	Indoor Use.
	Process carried out at room temperature.
	In case of dilution, tap water at a maximum temperature of 45°C is used.
<b>Air exchange rate</b>	Provide a basic standard of general ventilation (1 to 3 air changes per hour). No LEV required.

**Risk Management Measures**

<b>Measures related to personal protective equipment (PPE), hygiene and health evaluation</b>	Wear suitable gloves and eye protection. See section 8 of the SDS of this product for specifications.
	  Training of workers in relation to proper use and maintenance of PPEs must be ensured.
<b>Environmental measures</b>	Prevent that undiluted product reaches surface waters.
	<b>If appropriate AISE SPERC 8a.1.a.v2 may apply:</b> wide dispersive use resulting in release to municipal sewage treatment plant.

**Additional good practice advice**

<p><b>Don't eat or drink.</b></p> <p><b>Don't smoke.</b></p> <p><b>Don't use in proximity of open flame.</b></p>	
<p><b>Wash hands after use.</b></p> <p><b>Avoid contact with damaged skin.</b></p> <p><b>Do not mix with other products.</b></p>	
<b>Spillage instructions</b>	Dilute with fresh water and mop up.
<b>Hygiene practices</b>	Follow the product instructions as specified on the label or in the product information sheet and use good occupational hygiene practices as specified in Section 7 of the product SDS.

**Additional information depending on product composition**

The label and (when required) the Safety Data Sheet contain additional, product specific information crucial for working safely with mixtures. Please refer to the product label and SDS for information including, but not limited to: product hazard classification, potentially allergenic fragrances, notable ingredients and threshold limit values (when available).

where

**SUMI****Safe Use of Mixtures Information****AISE\_SUMI\_PW\_10\_1***Version 1.1, August 2018****Professional uses; Brushing after trigger spraying or brushing with tools***

*This document is intended to communicate the conditions of safe use for the product and should always be read in combination with the product's Safety Data Sheet and labels.*

**General description of the process covered**

This SUMI applies to professional uses where the product is brushed on a surface, with limited exposure to the hands, either after trigger spraying or through the use of tools such as a mop. This Safe Use Information is based on the **AISE\_SWED\_PW\_10\_1**.

**Operational Conditions**

<b>Maximum duration</b>	480 minutes per day.
<b>Range of application / Process conditions</b>	Indoor Use.
	Process carried out at room temperature.
	In case of dilution, tap water at a maximum temperature of 45°C is used.

# WORKING ISTRUCTION TABLE

This tab provides instructions for appropriate and safe use of products and proper management of emergency situations for cleaning staff/users.

Attached to MSDS rel#7 del 04/10/26

<b>Use description</b>	Use in batch and other process (syn- thesis) where opportunity for exposure arises [PROC4], Industrial spraying [PROC7], Transfer of substance or mixture (charging and discharging) at dedicated facilities [PROC8B], Transfer of substance or mixture (charging and discharging) at nondedicated facilities [PROC8A], Application with rollers or brushes [PROC10], Non industrial spraying[PROC11], Treatment of articles by dipping and pouring [PROC13]
<b>Product name</b>	<b>PERACID Forte</b>
<b>Classification of the product (100%)</b>	H242 - Heating may cause a fire. H290 - May be corrosive to metals. H302+H332 - Harmful if swallowed or if inhaled H311 - Toxic in contact with skin. H314 - Causes severe skin burns and eye damage. H318 - Causes serious eye damage. H335 - May cause respiratory irritation. H400 - Very toxic to aquatic life. H410 - Very toxic to aquatic life with long lasting effects. EUH071 - Corrosive to the respiratory tract.
<b>Classification of the diluted product (maximum use concentration)</b>	At maximux concentration of use (0,3%) the product is classified: H411 -Toxic to aquatic life with long lasting effects.
<b>Handling of the product (100%)</b>	Avoid contact and inhalation of vapors  Wear protective gloves/clothing and eye/face protection. At work do not eat or drink.
<b>Handling of the diluted product</b>	Avoid contact and inhalation of vapors  At work do not eat or drink.
<b>DPI required concentrated product (racking, concentrated use, spillage...)</b>	Chemical resistant protective gloves (EN 374-1/EN374-2/EN374-3), safety glasses (EN 166).
<b>Diluted product</b>	No DPI required for intended uses

In case of emergency (accidents involving exposure to the product)	Immediately inform the customer. Immediately inform the employer. Contact Poisons Centres tel. number in 1.4 section of the MSDS
Accidental release large quantities measures: concentrated product	Wear gloves, mask and protective clothing (for specifications refer to section 8.2. SDS) Possibly absorb it with inert materia or sucked it. After wiping up, wash with water the area and materials involved
Diluted product	Wear gloves and protective clothing (for specifications refer to section 8.2. SDS). Wash with water the area and materials involved
Storage of the product	Keep in original container closed tightly. Do not store in open or unlabelled containers. Keep containers upright and safe by avoiding the possibility of falls or collisions. Store in a cool and dry place, away from heat sources and direct exposure to sunlight.
In case of accidents, emergency or fire	Immediately inform the customer. Follow company emergency instruction.
