

FERMOPLUS Distiller Integrateur

Balanced fermentation nutrient for regular fermentations

TECHNICAL DESCRIPTION

Fermoplus Distiller Integrateur is a nutrient formulated to achieve the best possible fermentation run. It supplies the yeast with all the elements needed in order to produce ferments with more complexity and aromatic intensity. Beside increasing the level of readily assimilable nitrogen, **Fermoplus Distiller Integrateur** also supplies the must/wash/mash with vitamins, sterols and microelements, thus increasing yeast cell viability and producing a strong and active population, capable of depleting sugars even in conditions with a high alcoholic degree.

DOSAGE

We recommend a dosage of 20-75 g/hL depending on the base YAN value.

COMPOSITION AND TECHNICAL CHARACTERISTICS

Di-ammonium phosphate, yeast hulls, autolysates of yeast, inert filter aid, thiamine hydrochloride (vitamin B1).

INSTRUCTION FOR USE

Dissolve the dose in must and add to the mass evenly. Where necessary, the dose can be supplemented with any other nutrient of the AEB range.

STORAGE & PACKAGING

Store in a cool dry place, away from direct sunlight and heat.

1 kg net packs in cartons containing 15 kg.

5 kg and 20 net bags.
